

METI

Management Consulting Assessment & Development Platform

TECHNICAL DESIGN & DEVELOPMENT DOCUMENT (TDD)

Enterprise Management Consulting Track

Document	Value
Project	METI — Modus Enterprise Talent Intelligence Platform
Module	Management Consulting Assessments, Professional Personality & Values, Video, Paid Reports & Development Journey
Version	1.1 — Build Specification / Commercial Assessment Model Update
Date	21 August 2026
Audience	Product Owner, Solution Architect, AI Engineering, Front-end, Back-end, DevOps, QA, Assessment Design, Consulting Leadership
Status	Development-ready master TDD / baseline for Codex and engineering teams

Product intent — METI-MC is not a simple form or recruitment portal. It is an evidence-based enterprise consulting capability, professional personality/values, reporting and development platform. It must support paid assessment products, immediate summary value, a USD 250 premium detailed report and roadmap, AI-guided result explanation, human review and repeatable development journeys — all from one versioned evidence model.

Contents

1. Executive Summary
2. Source Basis and Traceability
3. Product Scope, Principles and Outcomes
4. Users, Roles and Tenancy
5. End-to-End Candidate Journey
6. Video-Led Orientation and Learning Experience
7. Assessment Architecture and Form Registry
8. Management Consulting Competency Model
9. Enterprise Talent DNA and Schwartz Values
10. Scoring, Evidence and Calibration Model
11. Video Communication and Executive Presence Assessment
12. Consulting Case, Research and Work-Sample Engine
13. AI Agent Architecture and Orchestration
14. Knowledge Graph and Enterprise Ontology
15. Data Model and Storage Architecture
16. API, Event and Integration Design
17. User Experience and Screen Requirements
18. Report Generation and Candidate Intelligence Outputs
19. Development Pathway, Mentor and Learning Engine
20. Administration, Content and Assessment Governance
21. Commercial, Payment and Entitlement Model
22. Security, Privacy, Fairness and Responsible AI
23. Non-Functional Requirements
24. Observability, Analytics and Model Operations
25. Testing, Psychometric Calibration and Quality Assurance
26. DevSecOps, Deployment and Environments
27. MVP / Release Plan
28. Definition of Done and Acceptance Criteria
- Appendix A. Existing Form Coverage Map
- Appendix B. Proposed Assessment Question-Type Catalogue
- Appendix C. Score Formulas and Thresholds
- Appendix D. Candidate Report Blueprint
- Appendix E. Codex / Engineering Build Directive

1. Executive Summary

METI (Modus Enterprise Talent Intelligence) should provide a dedicated Enterprise Management Consulting assessment journey that identifies what a candidate can do today, how they naturally think and work, what they have actually demonstrated, how ready they are for client-facing consulting, and what development pathway is most appropriate. The application must replace disconnected forms with a native, versioned assessment engine and an AI-assisted evidence model.

The uploaded consultant assessment already evaluates strategy, value chain, business analysis, process, target operating model, transformation, change management, consulting activities, international exposure, career motivation and development preference. The Enterprise Talent DNA assessment adds purpose, learning, systems thinking, innovation, communication, leadership, teamwork, consulting DNA and future/global thinking. The existing METI build specification adds resume intelligence, communication/video analysis, scoring, career matching, skills gaps, roadmaps, reports, dashboards, admin, knowledge graph and multi-agent orchestration. This TDD consolidates those elements into a management-consulting-first product architecture.

- Preserve the current public story: future of work → why enterprise management consulting → why Modus → candidate journey → capability assessment → next steps.
- Use videos as first-class journey objects with completion tracking, captions, transcript, knowledge checks and admin versioning.
- Commercialise Management Consulting and Professional Personality & Values as distinct paid assessment products, with a combined bundle option; support save-and-resume and entitlement-based access.
- Offer a Professional Personality & Values assessment built from Enterprise Talent DNA plus a Schwartz-informed values profile. Position it as professional-development intelligence, not a clinical or pass/fail personality diagnosis.
- Weight demonstrated evidence more heavily than self-reported experience.
- Generate candidate, assessor and recruiter views from the same evidence graph with different permissions.
- Keep final high-stakes progression decisions human-reviewable and fully auditable.

METI Management Consulting Assessment Journey

Save-and-resume across stages; every score is evidence-linked, versioned and explainable.

Recommended product structure — Stage 0 Free Orientation → Paid Management Consulting Assessment and/or Paid Professional Personality & Values Assessment → Included Summary of Findings → Optional USD 250 Detailed Intelligence Report & Personal Development Roadmap → Consulting Deep Dive / Work Sample / Human Review → Development Journey / Mentoring / Reassessment. The product must support separate and bundled entitlements rather than forcing every user into one monolithic assessment.

2. Source Basis and Traceability

This TDD is grounded in the materials supplied for this request and the linked Modus public assessment experience. Where this document adds new design detail, that detail is explicitly treated as proposed product design rather than a statement from the source forms.

Source	What it contributes	How this TDD uses it
0001 — MODUS Enterprise Transformation Consultant Assessment	52-question baseline covering profile, experience, communication, strategy, value chain, business analysis, process/TOM, transformation/change, consulting activities, readiness, interests, industries, geography, support and long-term motivation.	Forms F01–F03 and F06–F18; competency model; branching; readiness routing.
0002 — Modus Enterprise Talent DNA Assessment	42-question ranked-response assessment covering purpose, curiosity, systems thinking, innovation, communication, leadership, teamwork, consulting DNA and future/global thinking.	F04 Talent DNA; F05 values; behaviour and leadership reports.
MASTER CODEX BUILD INSTRUCTION	NextJS/FastAPI/PostgreSQL/Neo4j/Redis/Azure stack; 20 AI agents; multi-agent orchestration; reports, dashboards, RBAC and build rules.	Architecture, agents, APIs, knowledge graph, DevOps.
METI — Commercial Model	USD 25 diagnosis gateway, 25–40 page report, career matching, skills gap, roadmap, opportunity intelligence, candidate dashboard and later paid journeys.	Commercial gate, entitlements, report and pathway engine.
Modus Learn — Industry Value Chain Transformation page	Public narrative, explainer video, why consulting, Modus capability areas, journey choices, assessment stage, post-assessment outcomes and guidance video.	Stage 0 web experience, video flow, native assessment launch.
Linked YouTube video: “00-Modus Enterprise Transformation”	Video is embedded in the public Modus assessment experience; the accessible web page gives the surrounding explainer narrative and assessment flow.	Explainer video object V01 and orientation sequence.
Schwartz Theory of Basic Human Values (external research)	10 motivational value types organised in a circular structure and four higher-order value groupings.	F05 values module and values-report logic; separate from pass/fail readiness scoring.

Important assessment-governance note — If Modus uses a Schwartz-informed custom question set, the product must call it “Schwartz-informed values profile” unless a validated, appropriately administered Schwartz instrument has been implemented and psychometrically validated for the intended use.

3. Product Scope, Principles and Outcomes

3.1 In Scope

- Public landing and video-led orientation.
- Candidate registration, consent, identity, profile, CV/LinkedIn/portfolio ingestion and resume parsing.
- Product-level payment/entitlement gates for Management Consulting Assessment, Professional Personality & Values Assessment, combined bundles and the USD 250 Detailed Intelligence Report & Development Roadmap; configurable by tenant, country and campaign.
- Native assessment engine supporting single-choice, multi-select, ranked statements, matrix/Likert, scenario, free text, file upload, audio, video and case submissions.
- Enterprise Talent DNA assessment and Schwartz-informed values profile.
- Management Consulting capability assessments across strategy, research, enterprise analysis, value chain, processes, operating models, transformation, change, organisation, governance, programme/portfolio, AI awareness and executive communication.

- Video communication assessment and mock consulting interview.
- Case study and work-sample assessment with rubric-based AI scoring and human calibration.
- Consulting readiness, potential, client readiness, evidence confidence, skills gaps and development journey.
- AI-generated candidate report, internal assessor report and consented recruiter/employer view.
- Admin authoring, versioning, analytics, moderation, scoring weights, report templates and model/prompt governance.
- Multi-tenant capability for Modus, partner consultancies and future enterprise clients.

3.2 Out of Scope for v1

- Clinical or mental-health diagnosis.
- Automated adverse employment decisions without human review.
- Facial attractiveness, emotion, race, age, gender, disability or accent-based scoring.
- Claiming official psychometric validity before calibration and validation work is complete.
- Guaranteeing employment, salary, visa or client opportunity outcomes.

3.3 Core Design Principles

Principle	Implementation meaning
Evidence before assertion	Self-report is useful context but cannot outweigh demonstrated case, written and video evidence.
Explainability by design	Every aggregate score must link to contributing assessments, questions, artifacts, rubrics, model version and confidence.
Development, not rejection	Reports should identify current readiness and the next achievable pathway.
Version everything	Assessments, questions, scoring weights, prompts, rubrics, videos and reports require immutable versions.
Human-in-the-loop	AI can score and recommend; human reviewers can confirm, override with reason, and audit.
Fairness and accessibility	Protected/sensitive fields are separated from scoring. Accommodations are supported without penalty.
Platform, not form	All journeys are native, data-backed workflows rather than embedded third-party forms.
Reusable capability ontology	Competencies, roles, industries, assignments, reports and learning modules share one graph model.

4. Users, Roles and Tenancy

Role	Key capability
Candidate	Watch, register, pay, consent, complete assessments, submit video/work, review report, follow roadmap, interact with mentor.
Assessor / Senior Consultant	Review AI-scored evidence, calibrate cases/video, interview candidate, approve progression, add notes.
Mentor	See development profile and roadmap; set assignments; review progress; cannot access unnecessary sensitive data.
Recruiter / Employer Viewer	With candidate consent, view verified capability summary, evidence-backed readiness and shareable report.
Assessment Content Author	Create question banks, rubrics, cases, videos, learning content and report text.
Assessment Admin	Publish versions, manage weights, branches, entitlements, campaigns and calibration sets.
Compliance / Auditor	Read-only access to consent, model version, fairness metrics, audit events and overrides.
Tenant Admin	Manage partner consultancy / client organisation users, branding, price, allowed reports and data boundaries.
Super Admin	Global configuration, tenancy, models, environment flags, system policies, support and break-glass access.

Tenancy model: every user, assessment attempt, evidence artifact, report and configuration record carries tenant_id. Tenant isolation is enforced at API, database and object-storage layers. Shared global content (e.g., Modus competency definitions) is read-only and versioned; tenant overlays may extend but not silently modify the global baseline.

5. End-to-End Candidate Journey

Stage	Journey step	Experience	Core records
0A	Discover	Landing page explains the future of enterprise consulting and the Modus proposition.	Anonymous session + campaign attribution.
0B	Watch Explainer	Candidate watches V01; 80%+ completion or transcript/accessible equivalent unlocks "Start".	VideoProgress, transcript acknowledgement.
0C	Guidance	Assessment guidance video V02 + short comprehension check.	KnowledgeCheckResponse.
1A	Register / Consent	Account, identity, privacy consent, AI-scoring consent, communications preference.	Candidate, ConsentVersion, AuthIdentity.
1B	Profile / Resume	Education, experience, industries, geography, CV/LinkedIn/portfolio.	CandidateProfile + EvidenceArtifact.
1C	Choose Product / Entitlement	Candidate chooses Management Consulting Assessment, Professional Personality & Values Assessment, or a configurable combined bundle; payment activates only the purchased product entitlement.	Product, PriceBook, Payment, Invoice, Entitlement.
1D	Paid Assessment	Run only the entitled assessment modules. Consulting product prioritises consulting capability and readiness; Personality & Values product prioritises Talent DNA, behavioural preferences and Schwartz-informed values. Combined product runs both without duplicating shared profile questions.	AssessmentAttempts + ProductEntitlement + scores.
1E	Included Summary of Findings	Immediately show a concise findings summary: key scores, top strengths, priority development themes, values/personality highlights where purchased, evidence confidence and a high-level next-step recommendation. Detailed interpretation and roadmap remain locked unless the premium entitlement is purchased.	SummaryReportVersion + UpgradeOffer + Recommendation.
2A	USD 250 Detailed Intelligence & Roadmap	Premium upgrade unlocks detailed score interpretation, relevant deep-dive modules/evidence synthesis, full professional report, detailed gaps, role/pathway analysis and personalised development roadmap. Default price USD 250; configurable by tenant/country.	PremiumEntitlement + DetailedReport + LearningPlan + ExplanationSession.
2B	Case / Work Sample	Structured consulting case with written deliverables and optional data files.	CaseAttempt + Submission + RubricScore.
2C	Video / Interview	Executive answer, presentation or mock stakeholder discussion.	VideoSubmission + Transcript + CommunicationScore.
3A	AI Synthesis	Score, consistency, evidence confidence, role fit, gaps and pathway.	CompositeScore + EvidenceGraph.
3B	Human Review	Required for client-facing recommendation or borderline/low-confidence decisions.	ReviewDecision + override reason.
4	Development Journey	Foundation, Graduate Analyst, apprenticeship, mentor-led development, direct consulting or future reassessment.	LearningPlan + Milestones + Passport.

Session design: Stage 1 should remain achievable in approximately 35–45 minutes by using adaptive branching and short modules. The full deep-dive should be split into resumable 15–30 minute blocks, not forced into one sitting. Work samples

can be separately timed and may be completed under “closed AI”, “AI-assisted” or “open resource” conditions depending on the case version.

6. Video-Led Orientation and Learning Experience

The current Modus public assessment journey already uses an explainer video near the top of the page and a guidance video immediately before the assessment. The new application should make video content a managed platform object rather than a hard-coded embed.

ID	Video	Placement	Target length	Gate
V01	The Future of Enterprise Management Consulting	Public orientation	3–6 min	Required / accessible equivalent
V02	Assessment Guidance & Honest Responses	Before diagnosis	2–4 min	Required
V03	How Modus Thinks About Enterprise Strategy	Before strategy module	3–5 min	Optional / recommended
V04	Value Chain and End-to-End Enterprise Thinking	Before value chain module	3–5 min	Optional / recommended
V05	Operating Model / TOM Fundamentals	Before TOM module	3–5 min	Optional / recommended
V06	Transformation, Change and Benefits	Before transformation module	3–5 min	Optional / recommended
V07	Executive Communication for Consultants	Before video response	2–4 min	Required
V08	Case Challenge Rules and AI Usage Policy	Before case	2–3 min	Required
V09	Understanding Your METI Report	After report	4–6 min	Recommended
V10	Your Development Journey	Before enrolment	3–5 min	Recommended

6.1 Video Platform Requirements

- VideoSource supports YouTube embed, hosted MP4/HLS and future provider adapters.
- Store title, description, locale, transcript, captions, thumbnail, duration, assessment version, effective dates and tenant visibility.
- Track start, pause, seek, 25/50/75/90/100% milestones, completion method and last position.
- Use the YouTube IFrame API for embed progress where YouTube is used; do not rely only on page dwell time.
- Provide captions, keyboard controls, transcript view and a “read transcript instead” path where required for accessibility.
- After required videos, show a 1–3 question knowledge check to confirm understanding of assessment rules, not to test memory of marketing content.
- Admin may set unlock thresholds (default 80% viewed) and whether seeking counts toward completion.
- Never infer candidate characteristics from viewing behaviour; progress is used only for navigation and analytics.

7. Assessment Architecture and Form Registry

The legacy Microsoft Forms should be represented as versioned native assessment definitions. A “form” is a configurable collection of sections, items, scoring rules, branching rules and evidence requirements. The registry below is the minimum complete management consulting suite.

ID	Assessment / Form	Category	Purpose / coverage	Scoring role
F01	Registration, Consent & Identity	Profile	Name, email, mobile, country/city, login identity, privacy/AI consent, age eligibility if legally necessary.	No readiness score.
F02	Education, Experience & Evidence Profile	Profile	Education, roles, years, companies, industries, markets, international exposure, CV/LinkedIn/portfolio.	Context + evidence confidence; capped self-report contribution.
F03	Career Aspiration & Consulting Motivation	Potential	Commitment, why consulting, target practice areas, target industries/geographies, start readiness, development preference.	Potential / motivation; not client-readiness proof.
F04	Enterprise Talent DNA	Potential	Purpose, curiosity, systems thinking, innovation, communication, leadership, teamwork, customer/consulting DNA, future thinking.	Talent DNA dimensions + consistency.
F05	Schwartz-Informed Values Profile	Development	10 basic values and 4 higher-order dimensions using custom, theory-aligned items/ranks/scenarios.	Descriptive only; no pass/fail.

ID	Assessment / Form	Category	Purpose / coverage	Scoring role
F06	Strategy & Enterprise Thinking	Capability	Strategy knowledge, translation into initiatives, business model, strategic choices, enterprise problem framing.	Objective + scenario score.
F07	Business & Industry Research	Capability	Desk research, source quality, market sizing, industry structure, hypothesis, stakeholder interview plan, synthesis.	Research score + source discipline.
F08	Value Chain & Enterprise Analysis	Capability	End-to-end customer/products/value chain/process/org/tech/data/suppliers/finance; industry value chains.	Value Chain / BA score.
F09	Process, Capability & Operating Model / TOM	Capability	BPMN/SIPOC/swimlanes/value streams, capabilities, TOM components and design trade-offs.	Process/TOM score.
F10	Transformation & Change	Capability	Current/future state, roadmap, change impact, stakeholders, adoption, benefits, governance.	Transformation/change score.
F11	Organisation, Governance & Functional Design	Capability	Org design, roles, RACI, decision rights, functional design, governance, KPIs, skills.	Org/governance score.
F12	Programme, Portfolio & Benefits	Capability	Portfolio logic, prioritisation, dependencies, risk, milestones, benefits and PMO/TMO governance.	Programme/portfolio score.
F13	Enterprise AI & Digital Transformation Awareness	Capability	AI opportunity framing, process/role impacts, governance, data readiness, responsible AI, vendor/architecture awareness.	AI-for-consultants score.
F14	Professional Judgement, Ethics & Client Stewardship	Behaviour	Evidence-based challenge, escalation, confidentiality, conflicts, handling pressure, responsible recommendations.	Judgement score; mandatory risk gates.
F15	Executive Communication — Written	Demonstrated	Executive email/memo, 1-page problem summary, recommendation, pyramid structure, data references.	Rubric score.
F16	Executive Communication — Video	Demonstrated	2–5 minute response / presentation recorded in platform.	Communication + executive presence.
F17	Consulting Case & Problem Structuring	Demonstrated	Ambiguous enterprise case: issue tree, hypotheses, analyses, options, recommendation and risks.	Core case score.
F18	Work Sample / Deliverable Challenge	Demonstrated	Business case, value chain, TOM sketch, roadmap, stakeholder plan or executive deck.	Artifact rubric + evidence graph.
F19	Stakeholder / Workshop Simulation	Demonstrated	AI or human role-play: clarify needs, challenge assumptions, facilitate trade-offs, close actions.	Facilitation + stakeholder score.
F20	International & Client Readiness	Readiness	Cross-cultural examples, travel/work model preference, client exposure, communication confidence.	Contextual readiness; protected data excluded.
F21	Learning Agility & Development Preferences	Development	Availability for foundation, apprenticeship, mentoring, research projects, learning cadence.	Roadmap personalisation.
F22	Final Reflection & Long-Term Ambition	Development	Why Modus should invest, 5–10 year ambition, support needed, self-assessment.	Narrative input to roadmap; human-readable.

7.1 Supported Question / Evidence Types

- Single choice, multi-select with minimum/maximum selections, true/false, numeric, date, short text and long text.
- Rank 4 / rank N, matrix Likert, forced-choice scenario, paired comparison and conditional follow-up.
- Case stem with shared exhibits, file attachments, tables, data extracts and time-boxed sections.
- File upload: PDF/DOCX/PPTX/XLSX/PNG/JPG/ZIP where allowed; malware scan and file-type validation required.
- Audio/video record, upload or live response with duration controls and retry policy.
- Drag/drop sequencing and future visual mapping (value chain / operating model) via JSON response schemas.
- AI-chat simulation where each turn is logged as evidence and scored against a rubric.

7.2 Branching Rules

Branching must be deterministic and stored with the attempt so later score audits reconstruct exactly what the candidate saw. Examples: graduates skip detailed programme-management evidence unless they claim exposure; experienced consultants receive scenario depth questions; candidates with low video bandwidth can submit audio + written response; a high score in a short screening module can unlock a shorter deep-dive rather than repeat basic items.

8. Management Consulting Competency Model

ID / Competency	Definition
C01 Enterprise Strategy	Business strategy, strategic choices, competitive advantage, business model, strategic translation.

ID / Competency	Definition
C02 Research & Insight	Industry research, market analysis, source quality, synthesis, hypothesis, evidence handling.
C03 Enterprise Analysis	End-to-end enterprise structure, customer/product/service, value systems, financial outcomes.
C04 Value Chain Transformation	Value chain mapping, bottlenecks, value creation, ecosystem, suppliers, cross-functional transformation.
C05 Business Analysis	Requirements, problem framing, stakeholder analysis, business cases, traceability, benefits.
C06 Process & Capability	Process hierarchy, BPMN/SIPOC/swimlanes/value streams, business capabilities, process excellence.
C07 Operating Model / TOM	Customer, product, service, value chain, process, org, governance, technology, data, people, skills, KPIs, suppliers, financial model.
C08 Transformation Design	Current state, future state, roadmap, dependencies, workstreams, governance, outcomes.
C09 Change & Adoption	Stakeholders, change impacts, communication, training, adoption, readiness.
C10 Organisation & Governance	Org structures, roles, RACI, decision rights, governance, functional design.
C11 Programme / Portfolio / Benefits	Prioritisation, dependencies, milestones, risk, benefits realisation, TMO/PMO.
C12 Enterprise AI Transformation	AI opportunity framing, role/process redesign, governance, data, responsible AI, adoption.
C13 Problem Structuring	Issue trees, hypotheses, MECE thinking, prioritisation, assumptions, synthesis.
C14 Data & Commercial Thinking	Quantitative reasoning, financial logic, KPI design, value cases, scenario analysis.
C15 Executive Communication	Structured writing, verbal clarity, brevity, audience adaptation, recommendation storytelling.
C16 Facilitation & Stakeholder Management	Listening, questioning, workshop design, conflict handling, decision facilitation.
C17 Professional Judgement	Ethics, confidentiality, evidence-based challenge, risk escalation, quality discipline.
C18 Learning & Adaptability	Curiosity, feedback response, learning agility, ambiguity tolerance, reflective practice.
C19 Leadership & Collaboration	Ownership, team contribution, mentoring, influence, constructive challenge.
C20 International / Cross-Cultural Consulting	Multicultural teamwork, global market awareness, adaptable communication and travel/client readiness.

8.1 Proficiency Levels

Level	Evidence anchor
L0 — Awareness	Can recognise the concept but has not applied it.
L1 — Assisted	Can perform with a template, coaching or close review.
L2 — Independent	Can complete standard consulting work independently to quality expectations.
L3 — Lead	Can lead a workstream, facilitate senior stakeholders and coach others.
L4 — Expert	Can design methods, lead complex enterprise programmes and shape client executive decisions.

The system should store proficiency as evidence-backed capability estimates, not as simple self-selected labels. A candidate may self-report L3, but the final estimated level remains L1/L2 if demonstrated evidence does not support the claim.

9. Enterprise Talent DNA and Schwartz Values

9.1 Talent DNA

Retain the current ranked-response style because it reduces “all high scores” behaviour and captures trade-offs. The existing Talent DNA dimensions should be represented as separately scored scales: Purpose & Motivation; Learning & Curiosity; Enterprise & Systems Thinking; Innovation & Entrepreneurship; Communication & Collaboration; Leadership & Professional Judgement; Teamwork & Relationships; Customer & Consulting DNA; Future & Global Thinking.

- Rank questions use unique positions; no duplicate rank allowed.

- Base scoring: rank 1 = 4 points, rank 2 = 3, rank 3 = 2, rank 4 = 1; reverse only when defined by item metadata.
- Every statement maps to one or more competency/potential dimensions with a weight.
- Report both dimension score and response consistency; do not label preferences as “correct” unless the question is explicitly knowledge or judgement based.
- Use Talent DNA primarily for development potential and coaching style; demonstrated capability remains the primary client-readiness evidence.

9.2 Schwartz-Informed Values Model

Value	Core motivational meaning	Consulting interpretation (developmental)
Self-direction	Independent thought/action; creating, choosing and exploring.	Hypothesis independence, intellectual courage, autonomous problem solving.
Stimulation	Novelty, challenge and excitement.	Comfort with ambiguity and transformation; potential novelty bias.
Hedonism	Pleasure and enjoyment.	Work-energy preference; report descriptively, not as consulting capability.
Achievement	Success through demonstrated competence.	Delivery drive, standards, career ambition; watch status-over-substance risk.
Power	Status, prestige and control of people/resources.	Influence/commercial leadership; develop collaborative use of authority.
Security	Safety, stability and harmony.	Risk awareness, control, governance, delivery reliability.
Conformity	Restraint to avoid harming others / violating expectations.	Protocol discipline, client norms, quality; balance with constructive challenge.
Tradition	Respect and commitment to established customs/ideas.	Institutional respect and continuity; balance with future-state redesign.
Benevolence	Welfare of people in close contact / in-group.	Team support, mentoring, client care and dependable collaboration.
Universalism	Understanding, tolerance and welfare of all people/nature.	Stakeholder breadth, ESG/public value and global/systemic orientation.

9.3 Four Higher-Order Value Views

Higher-order view	Constituent values	METI report interpretation
Openness to Change	Self-direction + Stimulation; Hedonism partly overlaps	Experimentation, autonomy, change orientation, ambiguity tolerance.
Self-Enhancement	Achievement + Power; Hedonism partly overlaps	Achievement drive, influence, advancement and commercial ambition.
Conservation	Security + Conformity + Tradition	Stability, governance, duty, order, risk management and continuity.
Self-Transcendence	Benevolence + Universalism	Stakeholder welfare, collaboration, purpose, inclusivity and societal impact.

9.4 Values Scoring Method

1. Create 30–40 original, theory-aligned portrait/scenario/forced-choice items; do not copy a proprietary instrument verbatim.
2. Each item has a primary basic_value_id and optional secondary value with fractional weight.
3. Compute raw mean per value, then calculate the candidate's mean rating across all value items (MRAT).
4. Center each value: $\text{centered_value} = \text{raw_value_mean} - \text{MRAT}$. This expresses relative priorities rather than response-style inflation.
5. For ranked/forced-choice items, convert rank to points and center within question set before aggregation.
6. Report raw, centered and percentile score only when an adequate norm sample exists. Before norms, label as “relative priority within your profile”.
7. Calculate higher-order domains from centered constituent values; keep Hedonism separate or split its weight between Openness and Self-Enhancement by configured rule.
8. Do not use values scores as a rejection threshold or hidden “culture fit” score. Use them to tailor coaching, team style and development recommendations.

9.5 Values Report Outputs

- 10-value wheel / circumplex view.
- Four higher-order balance view.
- Top 3 relative priorities and 2 lower-priority motivations, phrased neutrally.
- Consulting strengths these priorities may support.
- Potential tensions: e.g., independence vs. conformity, achievement vs. stakeholder care, innovation vs. security.
- Change-leadership style, client-stewardship style, team-collaboration style and governance orientation.
- “How to work with me” coaching summary for candidate and mentor.
- No clinical labels, no moral judgement and no inferred sensitive characteristics.

9.6 Professional Personality & Values Assessment Product

The Professional Personality & Values product packages F04 Enterprise Talent DNA and F05 Schwartz-Informed Values as a standalone paid assessment. It should explain how the user tends to approach work, learning, collaboration, leadership, consulting situations and motivational trade-offs. It must not claim to diagnose a fixed personality type or mental-health condition.

- Included output: concise Personality & Values Summary of Findings with headline patterns, top relative values, collaboration/leadership preferences, learning style and 3–5 development themes.
- Premium output: when the USD 250 Detailed Intelligence & Development Roadmap entitlement is active, expand the profile into detailed interpretation, tensions/trade-offs, consulting implications, development priorities, practical exercises, mentor prompts and reassessment milestones.
- All explanations must show “why this finding appears” by referencing the relevant dimension, response pattern and confidence level without exposing proprietary scoring keys.
- The same assessment engine must support future professional-personality modules through versioned AssessmentDefinition and ScoringProfile records rather than hard-coded labels.

10. Scoring, Evidence and Calibration Model

METI must avoid the common failure mode of scoring a candidate mostly from what they claim they know. The scoring architecture separates self-report, objective/structured responses and demonstrated evidence, then exposes an Evidence Confidence score.

Capability component	Default weight %	Primary evidence
Strategy & Enterprise Thinking	10	F06, F17
Research & Insight	8	F07, F17, F18
Value Chain & Enterprise Analysis	10	F08, F17, F18
Process / Capability / TOM	10	F09, F18
Transformation & Change	9	F10, F18
Organisation / Governance / Functional Design	7	F11, F18
Programme / Portfolio / Benefits	6	F12
Enterprise AI Transformation Awareness	5	F13
Problem Structuring & Commercial Thinking	10	F17, F18
Executive Communication — Written	7	F15, F18
Executive Communication — Video	7	F16, F19
Stakeholder / Facilitation	5	F19
Professional Judgement	4	F14
Learning Agility / Adaptability	2	F04, F21

Default weights total 100 and are versioned by assessment profile. Schwartz values are deliberately excluded from the core capability score. Talent DNA contributes to potential and development reports; it does not compensate for missing capability evidence.

10.1 Composite Scores

Output	Definition	Scale
Consulting Capability Index (CCI)	Weighted demonstrated/current capability across C01–C20.	0–100
Consulting Potential Index (CPI)	Talent DNA, learning agility, motivation, consistency and improvement velocity.	0–100
Client Readiness Index (CRI)	CCI plus communication, judgement, stakeholder evidence, evidence confidence and reviewer gate.	0–100 + gate
Evidence Confidence (EC)	Completeness, recency, objective evidence ratio, rubric agreement, cross-assessment consistency.	0–100
Development Gap (DG)	Distance between current capability profile and selected target role profile.	0–100 gap
Role Match	Cosine/weighted similarity between candidate competency vector and role requirement vector, adjusted by mandatory gates.	0–100
Values Profile	Relative basic values and higher-order priorities.	Descriptive, not eligibility

10.2 Evidence Weighting Rules

Evidence type	Default confidence	Rules
Self-report checkbox / claim	0.25	Useful for branching and context; cap influence; never treat as proof.
Structured knowledge / scenario	0.55	Use keyed or rubric-scored answers; randomise question pools where appropriate.
Written free-text response	0.65	LLM + deterministic rubric + calibration; store rationale and model version.

Evidence type	Default confidence	Rules
Case / work-sample artifact	0.85	Primary capability evidence; score against explicit rubric and expected outputs.
Live / recorded consulting response	0.80	Transcript/content rubric plus delivery metrics; no facial/emotion scoring.
Verified prior work / portfolio	0.75	Candidate-supplied evidence; provenance and permission required.
Human assessor review	0.95	Final calibration evidence; overrides require reason and audit event.

10.3 Thresholds (Configurable Baseline)

Band	Indicative interpretation	Example routing
85–100	High demonstrated capability; CRI and evidence gates still apply.	Direct consulting review / senior pathway.
70–84	Consulting-ready in several areas with targeted gaps.	Consultant / analyst + mentoring or short bridge plan.
55–69	Strong potential, material development required.	Foundation + supervised research/apprenticeship.
40–54	Basic understanding / limited demonstration.	Foundation training and reassess.
<40	Early-stage capability or insufficient evidence.	Awareness / learning roadmap; no client-facing recommendation.

Thresholds must not be finalised until calibration with real assessor-scored samples. The TDD treats them as configuration defaults, not scientifically validated cut-offs.

11. Video Communication and Executive Presence Assessment

Video is required because client-facing consulting depends on the ability to explain a business problem, structure an answer, use evidence, adapt to an executive audience and make a clear recommendation. The platform should score observable communication, not appearance or inferred emotion.

Rubric dimension	Weight %	Scoring anchor
Relevance & answer completeness	15	Addresses the prompt, key constraints and client question.
Structure / pyramid logic	20	Clear headline, supporting points, sequence and close.
Business reasoning & evidence	20	Uses assumptions, evidence, trade-offs and implication.
Recommendation quality	15	Specific, actionable, balanced with risks / next steps.
Clarity & concision	10	Low redundancy, understandable language, executive brevity.
Verbal delivery	10	Pace, pauses, articulation, filler density and audibility; accent-neutral.
Audience adaptation / professionalism	10	Appropriate tone, stakeholder awareness and confidence without overclaiming.

11.1 Technical Flow

- Browser checks microphone/camera permissions and network quality; offer audio-only or upload alternative for accessibility/connectivity.
- Candidate receives prompt and preparation timer. Versioned prompt specifies attempts allowed and whether notes are permitted.
- Record using MediaRecorder / supported upload; stream to temporary object storage, then finalise to encrypted Blob path.
- Generate transcript using Azure AI Speech or configured speech service; retain timestamps and speaker confidence.
- Compute deterministic delivery metrics: duration, words per minute, filler ratio, long pauses and incomplete response; never score accent identity.
- LLM scores transcript/content against the rubric using constrained JSON output and cites transcript segments as evidence.
- If audio quality or model confidence is low, flag for human review rather than penalise.
- Store original video, transcript, derived metrics, rubric scores, model/prompt version and final review outcome.

11.2 Prohibited Video Inferences

- No facial emotion, attractiveness, age, gender, race/ethnicity, disability, health or socioeconomic inference.
- No scoring based on camera quality, clothing, background, skin tone or physical mannerisms.
- No accent penalty. Language clarity can be evaluated only against role-relevant communication requirements and with accommodation pathways.
- No automated rejection from video alone.

12. Consulting Case, Research and Work-Sample Engine

Case component	Requirement
Case Brief	Industry, client situation, objective, constraints, data pack, time limit, AI/resource policy.
Problem Definition	Restate problem, success metric, scope, assumptions and key questions.
Issue Tree / Hypotheses	Structured decomposition, prioritised hypotheses and rationale.
Analysis Tasks	Market / value chain / process / operating model / financial / stakeholder analysis as configured.
Options	At least 2–3 feasible options with benefits, cost, risk, dependencies and trade-offs.
Recommendation	Headline recommendation, evidence, decision rationale, risks and first 90-day actions.
Deliverable	1–3 page memo, 3–5 slide mini-deck, value-chain map, TOM sketch, roadmap or business case.
Reflection	What additional data is needed; what could invalidate the recommendation; what would you do next?

12.1 AI Usage Modes

Mode	Candidate rule	Why use it
Closed AI	No generative AI; platform blocks embedded mentor and candidate signs declaration.	Tests unaided structuring and fundamentals.
Open Resource	Web/docs allowed but no generative AI, if configured.	Tests research discipline and synthesis.
AI-Assisted Consulting	AI tools explicitly allowed; candidate must include prompts/sources and critique outputs.	Tests future consulting practice: judgement using AI rather than AI avoidance.
Live Challenge	Time-boxed screen + video response; assessor or agent introduces new information.	Tests adaptability and stakeholder reasoning.

12.2 Case Scoring

- Use explicit rubrics with 4–6 anchored levels per dimension.
- Score reasoning quality and evidence, not exact wording or a single “model answer”.
- LLM score must return JSON: dimension_score, evidence_quotes_or_artifact_refs, rationale, confidence, flags.
- For quantitative items, validate calculations deterministically in code where possible before LLM synthesis.
- Compare AI score against human calibration sample; if deviation exceeds configured tolerance, route to human review.
- Store all case versions and exhibits so an attempt can be reproduced years later.

13. AI Agent Architecture and Orchestration

The existing METI build instruction proposes a multi-agent platform. For the Management Consulting track, agents should have narrow responsibilities, structured inputs/outputs and shared evidence state rather than free-form autonomous behaviour.

Agent	Responsibility	Primary output
A01 Journey Orchestrator	Determines next allowed stage, branching, retries, prerequisites and completion state.	JourneyState JSON
A02 Registration & Profile Agent	Normalises profile, education, experience, industries, geography and evidence links.	CandidateProfile

Agent	Responsibility	Primary output
A03 Resume Intelligence Agent	Extracts roles, skills, industries, projects, achievements and consulting evidence from CV/portfolio.	EvidenceClaims + graph nodes
A04 Video Learning Agent	Tracks required video completion, transcript access and knowledge checks.	VideoProgress
A05 Talent DNA Agent	Scores F04 dimensions and response consistency.	TalentDNAProfile
A06 Schwartz Values Agent	Scores F05 basic/higher-order values and generates neutral development narrative.	ValuesProfile
A07 Consulting Capability Agent	Aggregates F06–F14 capability assessments against competency model.	CompetencyScores
A08 Research & Industry Agent	Scores source quality, research synthesis and industry reasoning.	ResearchScore
A09 Case Assessment Agent	Evaluates problem structuring, analysis, options and recommendation.	CaseRubricScore
A10 Communication Intelligence Agent	Scores written/video communication from transcripts/artifacts.	CommunicationScore
A11 Stakeholder Simulation Agent	Runs configured client/stakeholder role-play with hidden scenario state.	SimulationTranscript + score
A12 Integrity & Consistency Agent	Checks contradictory claims, missing evidence, copy similarity and AI-policy declarations.	Flags + confidence adjustments
A13 Scoring & Calibration Agent	Computes CCI/CPI/CRI/EC/DG, applies gates and calibration rules.	CompositeScoreSet
A14 Role & Pathway Recommendation Agent	Maps profile to consultant/analyst/graduate/research/apprenticeship pathways.	RecommendationSet
A15 Skills Gap & Learning Agent	Produces competency gaps, priority learning, assignments and reassessment plan.	LearningPlan
A16 Report Generator Agent	Builds candidate/internal/employer reports from locked evidence snapshot.	ReportPackage
A17 Mentor Agent	Explains report, coaches against roadmap, reviews assignments.	MentorConversation + actions
A18 Human Review Assistant	Summarises evidence for assessor and highlights low-confidence or conflicting areas.	ReviewBrief
A19 Fairness & Compliance Agent	Runs policy checks, protected-field exclusion tests and adverse-impact monitoring reports.	ComplianceFlags
A20 Admin Intelligence Agent	Assists admins with question/rubric analytics, item performance, content gaps and release checks.	AdminRecommendations

13.1 Orchestration Flow

Use LangGraph (or equivalent state machine) with explicit nodes, retries and conditional edges. No agent may directly alter a published score definition or candidate entitlement. Score generation always reads immutable assessment definitions, prompt versions and evidence snapshots.

Canonical orchestration — Candidate → Journey Orchestrator → Profile/Resume → Video Gate → Talent DNA + Values → Consulting Capability → Case/Work Sample → Communication/Simulation → Integrity/Consistency → Scoring/Calibration → Role/Pathway → Skills Gap/Learning → Report → Human Review if required → Dashboard/Mentor

13.2 Agent Contract Requirements

- Each agent has versioned system prompt, input JSON schema, output JSON schema, allowed tools, timeout, retry policy and confidence contract.
- Agents are stateless where practical; shared state lives in PostgreSQL/Neo4j and evidence storage.
- No free-form chain-of-thought is stored; store concise rationale, cited evidence IDs and decision metadata.
- All LLM outputs are schema validated. On validation failure, retry once with repair prompt, then fail safely to human review.
- Agent model selection is configuration, not hard-coded business logic.

14. Knowledge Graph and Enterprise Ontology

Logical Architecture

Experience Layer

Landing • Video • Registration • Assessments • Dashboard • Reports • Mentor

Journey & Assessment Layer

Form Engine • Video Engine • Case Engine • Work Samples • Interview • Payments

AI Orchestration Layer

Journey Orchestrator • Consulting Agents • Schwartz Values • Communication • Scoring • Report

Knowledge & Reasoning Layer

Competency Model • Question Bank • Rubrics • Neo4j Knowledge Graph • Azure AI Search • GraphRAG

Data & Evidence Layer

PostgreSQL / Azure SQL • Blob Evidence • Redis • Transcripts • Scores • Audit Events

Platform Services

Identity • RBAC • Consent • Notifications • Entitlements • Admin • Observability

Azure / DevSecOps

Container Apps • GitHub Actions • Key Vault • Monitor • App Insights • Backup • DR

Node	Meaning
Candidate	Person-level assessment subject; pseudonymous internal ID.
Role	Enterprise Consultant, Transformation Consultant, Business Analyst, Graduate Analyst, etc.
Competency	C01–C20 capability nodes.
Skill	Specific method/tool/knowledge such as BPMN, value chain mapping, benefits realisation.
Industry	Retail, banking, manufacturing, healthcare, energy, technology, FMCG, logistics, public sector, etc.
Framework	Value chain, TOM, business capability, RACI, change impact, programme governance, etc.
Assessment	Published version of F01–F22.
Question	Versioned assessment item.
Evidence	Response, artifact, video, transcript, resume claim or assessor note.
Rubric	Versioned scoring criteria.
Value	Schwartz basic value or higher-order domain.
LearningModule	Video, reading, workshop, assignment or mentor task.
Project	Work sample / apprenticeship project.
Report	Immutable generated report snapshot.
Tenant	Modus / partner consultancy / client boundary.

- Candidate —HAS_EVIDENCE→ Evidence
- Evidence —DEMONSTRATES→ Competency

- Competency —REQUIRED_FOR→ Role
- Candidate —HAS_ESTIMATED_LEVEL→ Competency
- Question —MEASURES→ Competency
- Assessment —CONTAINS→ Question
- Evidence —SCORED_BY→ Rubric
- Candidate —HAS_VALUE_PRIORITY→ Value
- Candidate —INTERESTED_IN→ Industry

15. Data Model and Storage Architecture

Entity	Minimum fields / purpose
Candidate	id, tenant_id, user_id, enterprise_id, status, locale, created_at
CandidateProfile	candidate_id, education, experience_summary, industries, markets, links; sensitive fields separated
ConsentRecord	candidate_id, consent_type, version, granted_at, withdrawn_at, source_ip_hash
AssessmentDefinition	id, tenant_id/global, code, name, version, status, timing, scoring_profile_id
AssessmentSection	assessment_id, order, branch_expression, instructions, video_id
QuestionDefinition	id, version, type, prompt, options_json, competency_map, scoring_rule, sensitivity_class
AssessmentAttempt	candidate_id, assessment_version, started_at, completed_at, state, time_spent
Response	attempt_id, question_id, answer_json, submitted_at, source_mode
EvidenceArtifact	candidate_id, type, storage_uri, checksum, provenance, consent_scope, malware_status
VideoSubmission	artifact_id, prompt_version, duration, transcript_id, retry_no
Transcript	artifact_id, segments_json, language, confidence, service_version
RubricDefinition	id, version, dimensions_json, anchors_json
ScoreComponent	candidate_id, assessment_attempt_id, competency_id, raw, normalised, confidence, evidence_refs
CompositeScoreSet	candidate_id, scoring_profile_version, CCI, CPI, CRI, EC, DG, gates_json
ValuesProfile	candidate_id, scoring_version, ten_values_json, higher_order_json, reliability_flags
Recommendation	candidate_id, target_role_id, fit, readiness, rationale, mandatory_gaps
LearningPlan	candidate_id, version, target_role, milestones_json, reassessment_schedule
Report	candidate_id, report_type, version, evidence_snapshot_id, storage_uri, generated_at
ReviewDecision	candidate_id, reviewer_id, decision, override_from, reason, created_at
VideoContent	id, version, provider, url/storage, transcript, completion_rule
VideoProgress	candidate_id, video_id, watched_seconds, max_position, completion_method
Payment	candidate_id, provider, amount, currency, status, external_ref
Entitlement	candidate_id, product_code, starts_at, expires_at, source
PromptVersion	agent_code, version, prompt_hash, model_policy, effective_at
AuditEvent	actor_id, candidate_id, entity_type, entity_id, action, metadata, timestamp

15.1 Storage Pattern

- PostgreSQL / Azure SQL: transactional user, assessment, response, score, payment and audit metadata.
- Neo4j: competency-role-skill-industry-assessment-learning relationships and evidence graph.

- Azure Blob Storage: CVs, case artifacts, video/audio, generated reports and large evidence files; private containers with short-lived SAS only.
- Azure AI Search / vector index: approved knowledge, assessment guidance, case content and report-grounding corpus. Candidate data indexed only when necessary and access-filtered.
- Redis: short-lived session state, rate limiting, queues and orchestration locks; never the source of truth.

16. API, Event and Integration Design

Endpoint	Purpose
POST /v1/auth/register	Create account / initiate OTP or SSO.
GET/PUT /v1/candidates/me	Read/update allowed profile fields.
POST /v1/consents	Record consent version.
POST /v1/evidence/uploads	Create signed upload session; scan on completion.
POST /v1/payments/checkout	Create payment session / entitlement purchase.
GET /v1/journey	Return current stage, prerequisites and next action.
GET /v1/videos/{id}	Video metadata + transcript rights.
POST /v1/videos/{id}/progress	Store player milestones / completion.
POST /v1/assessments/{code}/attempts	Create attempt against a locked version.
GET /v1/attempts/{id}/next	Return next section/question according to stored branch graph.
PUT /v1/attempts/{id}/responses/{questionId}	Idempotent save/update answer before final submit.
POST /v1/attempts/{id}/submit	Lock attempt and enqueue scoring.
POST /v1/video-prompts/{id}/submissions	Create recorded response submission.
POST /v1/cases/{id}/attempts	Create case attempt / timer state.
GET /v1/scores/me	Candidate-safe composite scores and explainability.
GET /v1/reports	List generated reports.
GET /v1/reports/{id}/download	Authorised short-lived download.
GET /v1/learning-plan	Current roadmap and milestones.
POST /v1/reviews/{candidateId}/decision	Assessor decision / override with reason.
POST /v1/admin/assessments	Create draft assessment version.
POST /v1/admin/assessments/{id}/publish	Publish immutable version after validation.
GET /v1/admin/calibration	Item/model performance dashboard.
GET /v1/admin/audit	Audit query with RBAC.

16.1 Domain Events

- CandidateRegistered, ConsentGranted, EntitlementActivated, VideoCompleted, AssessmentStarted, AssessmentSubmitted, ArtifactUploaded, TranscriptReady, ScoreCompleted, HumanReviewRequired, ReportGenerated, RecommendationCreated, LearningPlanPublished, ReassessmentDue, ConsentWithdrawn.
- Use durable queue/event bus pattern for asynchronous scoring/reporting. Event consumers must be idempotent and include correlation_id, tenant_id, candidate_id and version IDs.

17. User Experience and Screen Requirements

Screen	Minimum requirements
S01 Landing	Hero, explainer, future of consulting, why Modus, journey paths, outcomes, privacy summary, Start CTA.
S02 Video Explainer	Large player, captions, transcript, progress, chapter markers, accessible completion alternative.
S03 Registration	Email/SSO/OTP, country, consent, minimum profile.

Screen	Minimum requirements
S04 Checkout	Product summary, currency/tax, coupon/sponsor code, payment status.
S05 Candidate Dashboard	Journey progress, next action, saved assessments, reports, roadmap, reassessment dates.
S06 Assessment Runner	Stepper, section intro/video, question, autosave, time indicator, accessibility, clear save/exit.
S07 Rank Question	Drag/drop + keyboard accessible up/down controls and rank labels.
S08 Video Recorder	Prompt, prep timer, device check, record/review/submit, transcript disclosure, retry policy.
S09 Case Workspace	Case brief, exhibits, timer, structured response tabs, file upload, AI-policy badge.
S10 Report Viewer	Executive summary, scores, heatmap, values wheel, strengths/gaps, role matches, roadmap, methodology.
S11 Mentor Workspace	Candidate plan, evidence-linked gaps, assignments, notes, progress, reassessment.
S12 Assessor Review	AI summary, evidence viewer, rubric, transcript/video, score confidence, approve/override.
S13 Admin Assessment Builder	Forms, sections, question bank, scoring map, branch rules, preview, validation, publish.
S14 Admin Video Manager	Video versions, provider, transcript, completion rules, mapped assessments.
S15 Calibration / Fairness Dashboard	Item performance, model-vs-human agreement, score distributions, flags, override rates.
S16 Tenant / Commercial Admin	Branding, products/pricing, entitlements, users, roles, report sharing policies.

17.1 UX Requirements

- Mobile-responsive but optimised for desktop/tablet for case and work-sample stages.
- Autosave every answer change; visible “Saved” state; safe resume on another device.
- Progress shows sections completed, not a misleading percent when branching can change total questions.
- Candidate can review submitted self-report answers where policy allows, but cannot alter locked timed case/video submissions.
- Plain-language privacy and AI-scoring disclosure before first assessment.
- WCAG 2.2 AA target: keyboard navigation, focus states, captions, transcript, screen-reader labels and no colour-only meaning.

18. Report Generation and Candidate Intelligence Outputs

The commercial model calls for an immediate 25–40 page Enterprise Career Intelligence report. For the Management Consulting route, report generation should be modular so a 12–18 page core diagnosis and a 25–40 page full consulting report can be generated from the same evidence model.

#	Report section
1	Cover, enterprise ID, assessment version and date
2	Executive Summary: current stage, strongest evidence, priority gaps and recommended pathway
3	Consulting Capability Index, Potential Index, Client Readiness and Evidence Confidence
4	Competency radar across C01–C20
5	Capability heatmap: current estimated level vs target role level
6	Enterprise Talent DNA profile
7	Schwartz-informed Values Profile: wheel, higher-order balance, strengths/tensions and coaching implications
8	Strategy & Enterprise Thinking
9	Research & Industry Insight
10	Value Chain & Enterprise Analysis
11	Process / Capability / Operating Model / TOM
12	Transformation, Change, Organisation & Governance
13	Programme / Portfolio / Benefits and Enterprise AI awareness
14	Case / work-sample results with rubric evidence

#	Report section
15	Written & Video Executive Communication
16	Professional Judgement and Stakeholder / Facilitation readiness
17	Top role matches: e.g., Consultant, Transformation Consultant, Business Analyst, Graduate Analyst, Research Analyst; show mandatory gaps
18	Skills Gap and Development Priorities
19	12-week / 16-week personalised roadmap with assignments and reassessment milestones
20	Recommended Modus pathway and next action
21	Methodology, evidence confidence, limitations, AI/human review status and privacy statement

18.1 Report Variants

Variant	Audience	Differences
Detailed Candidate — USD 250	Candidate with premium entitlement	Full developmental language, detailed consulting findings, full values/personality profile if purchased, evidence explanations, development priorities and personalised roadmap.
Assessor	Senior consultant / reviewer	Adds question-level evidence, low-confidence flags, model rationale, calibration status and review controls.
Employer / Recruiter	Consented external viewer	Only verified capability, role fit and selected evidence; exclude unnecessary sensitive/personal data and development notes.
Mentor	Assigned mentor	Learning-relevant profile, gaps, values/coaching style and progress; no payment or unrelated personal data.
Admin / Analytics	Authorised internal	Aggregated/de-identified analytics; item performance and model quality.
Summary Findings	Candidate after paid assessment	Concise headline findings only: key scores, strengths, development themes, confidence, high-level recommendation and clear USD 250 upgrade path; no detailed roadmap.

18.2 Report Explainability Requirements

- Every chart score links to “How this was calculated” with contributing assessments and evidence types.
- AI narrative must be grounded only in locked score/evidence JSON; no unsupported biography or trait inference.
- Display confidence and human-review status where relevant.
- Candidate can flag factual inaccuracies in resume extraction or profile data; corrections are versioned and do not overwrite submitted assessment evidence.
- PDF generation uses a fixed report template version; dashboard and PDF show the same score snapshot.

18.3 Summary Findings vs. USD 250 Detailed Report

METI must deliberately separate the immediate assessment value from the premium interpretation service. Every paid assessment produces a useful Summary of Findings; the detailed analysis and personalised development roadmap are a distinct premium product priced at USD 250 by default.

Output tier	Included content	Commercial rule
-------------	------------------	-----------------

Output tier	Included content	Commercial rule
Assessment Summary of Findings	Headline scores; 3–5 strengths; 3–5 development themes; high-level readiness/personality-values interpretation; evidence confidence; short next-step recommendation; upgrade CTA.	Included with the purchased Consulting or Personality & Values assessment.
Detailed Intelligence Report	Full score explanations, competency/values sections, evidence interpretation, detailed strengths and gaps, role/pathway implications, confidence/limitations, appendices and downloadable PDF/dashboard.	USD 250 default premium entitlement; configurable by tenant/country/campaign.
Personal Development Roadmap	Prioritised capability gaps, 8/12/16-week plan as appropriate, weekly actions, learning content, cases, mentor prompts, measurable milestones and reassessment schedule.	Included in the USD 250 premium entitlement.
AI Results Explanation	Interactive METI Results Explainer answers user questions about findings, methodology, strengths, gaps and next actions from the locked score/evidence snapshot.	Summary-level explanation included; detailed explanation and roadmap coaching unlock with premium entitlement.

19. Development Pathway, Mentor and Learning Engine

Pathway	When recommended	Typical next step
P1 Direct Consulting Review	High capability + CRI + evidence confidence + human approval.	Client-facing shortlist; targeted onboarding.
P2 Consultant Bridge	Good capability with 2–4 specific gaps.	4–8 week targeted modules and reassessment.
P3 Graduate Analyst	Strong potential, foundational capability, low experience.	Structured analyst development + supervised assignments.
P4 Enterprise Transformation Foundation	Material gaps across core consulting foundations.	6–8 week Value Chain & Enterprise Transformation programme.
P5 Research & Consulting Apprenticeship	Need real evidence / international consulting exposure.	2–3 month supervised research and live project work.
P6 Business Analyst Route	Strong analysis/value chain/process skills; consulting breadth still developing.	BA-focused assignments + strategy/TOM bridge.
P7 Executive Upskilling	Experienced manager/executive developing transformation consulting or AI advisory.	6–12 week executive modular plan.

Pathway	When recommended	Typical next step
P8 Future Reassessment	Insufficient evidence or commitment today.	Self-learning plan + reassessment date; no negative label.

19.1 Learning Plan Object

- Target role and target competency levels.
- Prioritised gaps, each linked to one or more learning modules, videos, readings, exercises, cases and mentor tasks.
- Weekly milestones, estimated hours, evidence to submit and reassessment rule.
- Progress computed from evidence completion, not only content watched.
- Recommendations are versioned; candidate may keep historical plans for progress comparison.

20. Administration, Content and Assessment Governance

Admin module	Requirements
Assessment Builder	Create draft versions, sections, instructions, questions, options, timers, branching and scoring mappings.
Question Bank	Tag by competency, level, industry, role, item type, language and validation status; manage retirement and exposure limits.
Rubric Manager	Define dimensions, anchors, weights, mandatory gates and examples.
Case Library	Cases, exhibits, AI-policy mode, time limit, target level, scoring rubric and allowed resources.
Video Manager	Upload/link, transcript, captions, completion rules, mapped stage, locale and effective dates.
Scoring Profile	Weights, normalisation, thresholds, confidence rules, role profiles and route logic.
Prompt / Model Registry	Agent prompt, schema, model, temperature/policy, effective dates, rollback and evaluation status.
Report Templates	Candidate/internal/employer layouts, narrative blocks, charts, branding, terms.
Publishing Workflow	Draft → peer review → calibration check → compliance check → approved → published.
User / Role Admin	RBAC, tenant membership, assessor assignment, mentor assignment, external viewer access.
Commercial Admin	Products, currencies, taxes, coupons, sponsor entitlements, invoice rules.
Analytics	Completion funnels, item statistics, time-on-task, score distributions, review overrides, model drift, fairness metrics.

Publishing rule — A published assessment version is immutable. To change a question, rubric, weight, video gate or report logic, create a new version. Existing attempts remain bound to the version they started.

21. Commercial, Payment and Entitlement Model

The original METI commercial model used a USD 25 diagnosis as the gateway into the platform. This TDD extends that concept into a product-led assessment model: Management Consulting Assessment and Professional Personality & Values Assessment are separately chargeable assessment products, with an optional combined bundle. Each paid assessment includes a concise Summary of Findings. A Detailed Intelligence Report plus personalised Development Roadmap is a separate premium entitlement priced at USD 250 by default. All prices must remain configuration-driven by tenant, country, tax and campaign.

21.1 Paid Assessment Product Model

The application must sell assessment products, not expose a single hard-coded “pay once” gate. Product selection determines the form set, report scope, AI explanation scope and later upgrade options.

- Product MC-A: Management Consulting Assessment — default entry price USD 25 unless overridden; assesses consulting knowledge, judgement, readiness and evidence-backed capability.

- Product PV-A: Professional Personality & Values Assessment — default entry price USD 25 unless overridden; combines Enterprise Talent DNA with the Schwartz-informed values profile for professional development.
- Product COMBO-A: Consulting + Personality & Values Bundle — price fully configurable; shared profile questions run once and both summary outputs are produced.
- Product D250: Detailed Intelligence Report & Development Roadmap — default USD 250; can be purchased after either assessment or the bundle and expands only the evidence domains the user has completed.
- Admin must support regional prices, coupons, sponsor codes, enterprise-funded assessments, tax/VAT/GST, bundles, limited-time campaigns and future subscription/add-on products.

Stage / Product	Default commercial rule	Entitlement
Stage 0 Orientation	Free	Public explainer videos, consulting/personality product explanation and journey information.
Management Consulting Assessment (MC-A)	USD 25 default; configurable	Consulting assessment modules, baseline consulting score/readiness and included Summary of Findings.
Professional Personality & Values Assessment (PV-A)	USD 25 default; configurable	Enterprise Talent DNA + Schwartz-informed values modules and included Personality & Values Summary of Findings.
Combined Assessment Bundle (COMBO-A)	Configurable bundle price	Both paid assessment products; common profile data/questions run once; combined Summary of Findings.
Detailed Intelligence Report & Development Roadmap (D250)	USD 250 default; configurable	Detailed report, evidence explanations, full strengths/gaps, role/pathway interpretation, personalised development roadmap, premium AI Results Explainer.
Case / Work Sample	Programme, premium, sponsored or recruitment entitlement	Case engine, work sample and reviewer workflow where required for deeper evidence.
Mentorship / Human Review	Subscription, programme or separately priced service	Mentor workspace, consultant review session, assignments and progress support.
Foundation / Apprenticeship	Programme pricing	Learning plan, projects, reassessments, passport and development evidence.
Employer Access	Subscription / contracted access	Consented verified talent search / report access.

21.2 Summary Findings Entitlement

Every paid assessment must return immediate useful value. The Summary of Findings is not a teaser with no substance; it should explain the user's main scores, strongest patterns, 3–5 strengths, 3–5 development themes, confidence/limitations and a short next-step recommendation. It must remain concise enough that the USD 250 premium product has clear additional value.

21.3 Detailed Intelligence Report & Development Roadmap — USD 250

The USD 250 premium entitlement unlocks the detailed interpretation layer. It generates a full evidence-grounded report and a practical personal development roadmap based on the user's completed assessment products. The premium deliverable includes detailed score explanations; consulting competency or professional personality/values sections as applicable; evidence confidence; strengths, gaps and tensions; target-role/pathway implications; prioritised development actions;

weekly/monthly milestones; recommended videos, readings, cases and mentor tasks; reassessment dates; and downloadable PDF/dashboard versions.

21.4 AI Results Explainer and Consultant Review Mode

Build a dedicated METI Results Explainer as a constrained AI model/agent over the candidate's locked assessment snapshot. The user should be able to ask "What does this score mean?", "Why is this a strength?", "What should I work on first?" and "How does this affect consulting readiness?". The same explainability view must be usable by a Modus consultant during a review session so the consultant and user see the same underlying evidence. The agent must never invent findings, change scores, disclose hidden scoring keys or unlock premium roadmap detail without the required entitlement.

21.5 Payment Requirements

- Primary provider: Stripe; adapter interface for Razorpay/PayPal or other providers if required.
- Webhook verification is the source of truth for payment completion; UI redirect alone does not activate entitlement.
- Currency, tax, invoice, refund policy, per-product price, bundle price and USD 250 premium price configurable by tenant/country/campaign; USD values are default commercial baselines, not hard-coded business logic.
- Generate the included Summary of Findings after successful payment for the selected assessment product. Generate the detailed report and development roadmap only when the D250 premium entitlement is active, unless a sponsor/enterprise campaign grants that entitlement.
- Payment data is not sent to assessment-scoring agents.

22. Security, Privacy, Fairness and Responsible AI

22.1 Authentication and Authorisation

- Candidates: email OTP and optional Google/Microsoft sign-in. Enterprise/partner users: Microsoft Entra ID preferred.
- JWT/OIDC tokens with short lifetimes; refresh-token rotation; MFA for admin and assessor roles.
- RBAC + tenant scope + candidate-consent scope on every protected endpoint.
- Break-glass admin access logged and reviewed.

22.2 Data Protection

- Encrypt in transit (TLS 1.2+) and at rest; keys/secrets in Azure Key Vault.
- Separate sensitive demographic/support data from scoring features. Gender, age group, personal commitments, caring responsibilities and similar fields must not influence readiness or role-match scores.
- Data minimisation: if a field is not required for lawful product operation, do not collect it. Make "prefer not to say" available where appropriate.
- Candidate can request export, correction and deletion/withdrawal subject to legal retention obligations.
- Configurable retention policy by evidence type: profile, assessment response, raw video, transcript, report, audit and payment records.
- For UK/EU users, support GDPR/UK GDPR obligations; for India, support DPDP-aligned consent and data-principal workflows; local legal review is required before launch.

22.3 Fairness and Assessment Safety

- No protected attribute enters scoring feature vectors or prompts used to generate readiness/recommendation scores.
- Video scoring is content/delivery based and must be accent-neutral; avoid facial/emotion inference.
- Values are developmental, not a culture-fit rejection tool.
- Personal circumstances/support questions may tailor scheduling/support but must not lower candidate capability scores.
- Human review is mandatory before a "client-facing ready" recommendation is exposed externally.
- Run fairness analysis on score distributions and progression outcomes across legally permitted monitoring groups, using separated compliance access.
- Any AI override or human override must be logged with reason and old/new decision state.

22.4 Prompt Injection / Untrusted Content

- CVs, PDFs, case uploads and external text are untrusted input. Extraction agents must treat embedded instructions as data, not system commands.
- Use content sanitisation, file-type checks, malware scanning and strict tool allow-lists.
- Report-generation agents can only retrieve approved evidence IDs and cannot browse arbitrary URLs on behalf of a candidate report unless a research mode explicitly allows it.
- Prevent cross-candidate and cross-tenant retrieval by security filters at SQL, graph and search layers.

23. Non-Functional Requirements

NFR	Target
Availability	99.9% monthly target for candidate-facing platform excluding planned maintenance.
Performance	P95 API reads <500 ms for transactional endpoints; assessment save <800 ms; dashboard <2 s after cache warm; async scoring status visible immediately.
Autosave	Response persisted within 2 seconds of change; retry offline queue where browser supports.
Scalability	Baseline 10,000 concurrent active candidates with horizontally scalable assessment/API services; long-running AI work offloaded to queue workers.
Accessibility	WCAG 2.2 AA target; captions/transcripts; keyboard rank controls; accessible video alternatives.
Internationalisation	Locale-aware content, currencies, time zones and date formats; assessment text versioned by language.
Auditability	Every score/recommendation reproducible from immutable version IDs and evidence snapshot.
Recovery	RPO ≤ 15 min for transactional data; RTO ≤ 4 hours baseline; backup restore tested quarterly.
Observability	Structured logs, distributed traces, metrics, AI call telemetry, cost/latency, queue depth and health checks.
Security	OWASP ASVS-aligned controls, dependency scanning, secret scanning, SAST/DAST and regular penetration testing.
Data portability	Reports as PDF plus machine-readable JSON; candidate export package where permitted.
Browser support	Current + previous major versions of Chrome, Edge, Safari; responsive mobile support for non-case journeys.

24. Observability, Analytics and Model Operations

- Application: request latency, error rate, auth failures, assessment autosave failures, upload failures, report generation failures.
- Journey: landing→video→registration→payment→assessment start→completion→report conversion funnel; abandonment by section and device.
- Assessment quality: item difficulty, response distribution, time per item, missingness, discrimination, consistency, question exposure rate.
- AI quality: schema-failure rate, model latency/cost, human-vs-AI score agreement, confidence distribution, override rate, prompt/model drift.
- Video: transcription error flags, low-audio-quality rate, human rescore rate; never aggregate facial/appearance analytics.
- Commercial: conversion by Consulting vs Personality & Values vs bundle; summary-to-USD-250 upgrade conversion; premium report completion; AI-explainer usage; human-review conversion; refunds, programme conversion and reassessment retention.
- Fairness/compliance: protected-field exclusion test, progression distribution monitoring, complaint/appeal outcomes, model/version audit.

24.1 Model Registry Requirements

For every AI-derived score, store provider/model identifier, deployment name, prompt version, rubric version, temperature or determinism policy, input evidence IDs, output JSON hash, token/cost telemetry, latency, confidence and moderation/safety flags. Production model changes require offline evaluation and controlled release.

25. Testing, Psychometric Calibration and Quality Assurance

25.1 Software Test Pyramid

- Unit tests: scoring functions, rank conversion, branching expressions, entitlements, role gates, API validation.
- Contract tests: agent JSON schemas, event contracts, payment webhooks, storage adapters, search/graph filters.
- Integration tests: assessment submit→score→report; video upload→transcript→score; payment→entitlement→unlock.
- E2E tests: candidate flow on desktop/mobile; assessor review; admin publish; tenant isolation.
- Security tests: broken access control, IDOR, upload abuse, prompt injection, tenant data leakage, secrets and token expiry.
- Performance tests: large assessment, concurrent autosave, video upload, queue backpressure, report generation.

25.2 Assessment / Psychometric Quality

- Expert content review for each competency and proficiency level.
- Pilot with candidates and experienced consultants; collect human rubric scores as calibration ground truth.
- Analyse item difficulty, item-total relationships, completion time and ceiling/floor effects for knowledge items.
- For multi-item scales (Talent DNA / values), examine internal consistency and factor structure where appropriate, but do not overclaim validity from small samples.
- Assess test-retest stability for values/potential scales where the product claims persistence.
- Validate that values dimensions remain descriptive and are not driving adverse selection outcomes.
- Human-AI agreement target for rubric scoring should be set per dimension after pilot; low agreement requires rubric or model redesign, not silent averaging.
- Run inter-rater reliability for human assessors and calibration sessions using benchmark cases.

25.3 Release Gates

Gate	Minimum evidence before production
Assessment content	Consulting lead approval + QA + no broken branching + accessibility review.
Scoring profile	Unit tests + calibration sample + score-distribution review + rollback version.
AI rubric scorer	Schema pass >99%, defined human agreement threshold met, hallucination audit, low-confidence fallback tested.
Video scoring	Accent-neutral review, accessibility alternative, human fallback, no prohibited inference.
Values report	Neutral wording review, theory traceability, no pass/fail use, candidate explanation tested.
Report generator	No unsupported claims; score snapshot parity; PDF visual QA; privacy variant tests.
Tenant launch	Data isolation test, RBAC test, pricing/entitlement test, retention policy configured.

26. DevSecOps, Deployment and Environments

The baseline technology stack from the existing METI build instruction is retained: NextJS 15 / React / TypeScript / Tailwind / ShadCN front-end; FastAPI / Python backend; PostgreSQL/Azure SQL; Neo4j; Redis; Azure OpenAI / Azure AI Foundry; Azure AI Search; LangGraph; Blob Storage; Docker; GitHub Actions; Azure Container Apps; Azure Monitor.

Environment	Purpose	Data policy
Local	Developer Docker Compose; mocks for payment/email/AI where possible.	Synthetic data only.
DEV	Shared integration, automated tests, fast iteration.	Synthetic / approved test data.
QA	Release candidate, E2E, accessibility, performance smoke.	Synthetic + controlled calibration data.
UAT	Consulting/content owner acceptance and calibration.	Consented pilot data where required.
PROD	Live candidate / partner use.	Production data; strict RBAC, monitoring, backup and retention.

26.1 CI/CD Pipeline

17. PR checks: lint, type check, unit tests, secret scan, dependency scan, SAST, OpenAPI diff.
18. Build signed Docker images and SBOM; push to registry with immutable tag.
19. Deploy DEV automatically; run integration/E2E/contract tests.
20. Promote to QA/UAT via approval; run database migrations with backward-compatible strategy.
21. Production requires release approval, migration plan, feature flags and rollback image.
22. Assessment/prompt/model content has its own publish workflow and is not silently changed by code deployment.

27. MVP / Release Plan

Phase	Indicative duration	Deliverables
Phase 0 — Foundation	2 weeks	Repo, architecture skeleton, auth, tenancy, RBAC, database, audit, CI/CD, Blob, admin shell.
Phase 1 — Core Diagnosis	4 weeks	Landing/video, registration, product catalogue, separate Consulting and Personality & Values payments/entitlements, F01–F05 plus baseline consulting assessment, autosave, scoring, included Summary of Findings and USD 250 upgrade CTA.
Phase 2 — Consulting Deep Dive	4 weeks	F06–F14 domain modules, question bank, branching, competency graph, scoring/calibration dashboard.
Phase 3 — Video & Case Evidence	4 weeks	F15–F19, recorder, transcription, case workspace, rubric scoring, human review.
Phase 4 — Development Journey	3 weeks	USD 250 detailed report entitlement, detailed evidence interpretation, personalised development roadmap, role match/gaps, AI Results Explainer, mentor workspace, reassessment and passport/progress.
Phase 5 — Partner / Employer	3 weeks	Multi-tenant branding, employer/recruiter view, sharing consent, external reports, commercial admin.
Phase 6 — Calibration & Hardening	Ongoing	Psychometric/assessment calibration, fairness audits, performance, security, model evaluation, content expansion.

Durations are engineering planning estimates, not commitments. The recommended first production milestone is a complete Core Diagnosis + report loop rather than many half-built assessment modules.

28. Definition of Done and Acceptance Criteria

Area	Acceptance criterion
Journey	Candidate can start from landing, choose Consulting, Personality & Values or bundle, pay, activate the correct entitlement, complete only entitled assessment modules, receive Summary of Findings, purchase the USD 250 detailed report/roadmap, and continue to the relevant development journey.
Forms	All F01–F22 definitions are supported by the native engine even if some modules are feature-flagged at launch.
Versioning	Every attempt binds to immutable assessment, question, scoring, prompt and report template versions.
Scoring	CCI/CPI/CRI/EC/DG reproduce deterministically from stored evidence and configuration; values are not included in pass/fail readiness.
Video	Record/upload/transcribe/score works; accessible alternative works; prohibited inferences are absent.
Case	Timed case supports exhibits, autosave, submission lock, rubric scoring and human review.
Reports	Summary Findings and USD 250 detailed candidate/internal PDF/dashboard variants are entitlement-correct, match the locked score snapshot, clearly distinguish included vs premium content and contain no unsupported AI claims.
Security	Tenant isolation, RBAC, consent, signed evidence access, malware scan and audit logs pass test suite.

Area	Acceptance criterion
Fairness	Protected/sensitive fields are demonstrably excluded from scoring inputs and prompts; monitoring dashboard available to compliance role.
Admin	Non-developer admin can create/publish assessments and manage product catalogue, MC/PV/bundle pricing, USD 250 premium price, coupons/sponsors, entitlements, report templates and country/tenant overrides without code changes.
Observability	Trace a candidate attempt from UI request through agent calls, scores and report via correlation ID.
Documentation	OpenAPI, data dictionary, agent contracts, runbooks, model cards, assessment version notes and deployment guide are generated/maintained.

Appendix A. Existing Form Coverage Map

This appendix shows how the current uploaded forms map into the proposed native METI-MC assessment suite. It is intended to ensure that no current capability area is lost during migration.

Existing source block	Coverage	Target METI-MC module
Consultant Assessment Q1–8	Identity / demographics / country-state-city	F01; sensitive fields separated from scoring.
Q9–17	Education, experience types, industries, compensation, countries/cities	F02; compensation optional and excluded from readiness scoring.
Q18–21	Business English, senior stakeholders, international/multicultural exposure, markets	F02 + F20; self-report context.
Q22–24	Strategy confidence, translating strategy, consulting knowledge areas	F06 baseline + branching to F06–F13.
Q25–27	End-to-end enterprise analysis, value chain mapping, industries understood	F08.
Q28–31	Process level, BPMN/SIPOC/swimlanes/VSM/journey/service blueprint/process hierarchy, TOM, TOM components	F09.
Q32–34	Transformation/change programme experience, activities, change management	F10.
Q35–38	Independent consulting activities, capability self-view, role level, training/apprenticeship preference	F03 + F21; self-view does not override evidence.
Q39–46	Career commitment, why consulting, interest areas, industries, geography, start date, CV/LinkedIn	F03 + F02.
Q47–51	Personal commitments, assignment flexibility, working arrangement, support and learning environment	F20/F21 support context; not capability score.
Q52	Why Modus should invest / 5–10 year ambition	F22.
Talent DNA Q16–18	Purpose & Motivation	F04 Purpose + value/impact mapping.
Q19–21	Learning & Curiosity	F04 Learning Agility.
Q22–24	Enterprise & Systems Thinking	F04 Systems + F06 potential indicator.
Q25–27	Innovation & Entrepreneurship	F04 Innovation.
Q28–30	Communication & Collaboration	F04 behaviour + F19 potential.
Q31–33	Leadership & Professional Judgement	F04 + F14.
Q34–36	Teamwork & Relationships	F04 + F21 development context.
Q37–39	Customer & Consulting DNA	F04 + F14.
Q40–42	Future & Global Thinking	F04 + F05 Universalism / future orientation context.

Appendix B. Proposed Assessment Question-Type Catalogue

Type	Use	Scoring
QT01 Single choice	Knowledge / classification / best action.	Keyed score or rubric.
QT02 Multi-select	Experience, methods, artifacts, industries.	Weighted with max cap; self-report confidence lower.
QT03 Rank 4	Talent DNA / forced trade-off.	4-3-2-1 mapping by statement dimension.
QT04 Matrix Likert	Frequency / confidence / behavioural tendency.	Scale + reverse-coded metadata.
QT05 Scenario judgement	Client/ethics/change situations.	Rubric / best-next-action; may allow partial credit.
QT06 Short text	Clarification / factual response.	Validation or LLM rubric where needed.
QT07 Long text	Executive memo / reasoning / reflection.	LLM + rubric + human calibration.
QT08 Numeric / calculation	Commercial / quantitative case.	Deterministic calculation + tolerance.
QT09 File upload	Deck, memo, value chain, TOM, business case.	Artifact parsing + rubric.

Type	Use	Scoring
QT10 Video	Executive answer / presentation.	Transcript rubric + delivery metrics.
QT11 Audio	Accessible / low-bandwidth alternative.	Same content rubric; delivery metrics.
QT12 Timed case section	Shared exhibits + structured responses.	Multi-dimensional case score.
QT13 AI role-play chat	Stakeholder simulation.	Turn-level rubric + final interaction score.
QT14 Visual mapping	Future drag/drop value chain/TOM map.	Structured JSON vs reference/rubric.
QT15 Declaration	AI policy, originality, consent, conflict.	Gate / audit, not capability points.

Appendix C. Score Formulas and Threshold Logic

Illustrative formulas below are implementation-ready defaults but must remain configuration-driven and calibrated before high-stakes use.

Question score — $\text{normalised_question} = \text{clamp}((\text{raw} - \text{min_possible}) / (\text{max_possible} - \text{min_possible}) \times 100, 0, 100)$

Competency score — $\text{competency} = \Sigma(\text{normalised_evidence} \times \text{evidence_confidence} \times \text{mapping_weight}) / \Sigma(\text{evidence_confidence} \times \text{mapping_weight})$

Evidence confidence — EC combines objective_evidence_ratio, completion, recency/provenance, model confidence, human agreement and cross-assessment consistency. Weights are versioned and visible to admins.

Role match — $\text{role_fit} = \text{weighted_similarity}(\text{candidate_competency_vector}, \text{role_requirement_vector}) \times \text{mandatory_gate_factor}$. Mandatory gaps can cap fit even when overall similarity is high.

Client readiness gate — $\text{client_facing} = (\text{CCI} \geq \text{threshold}) \text{ AND } (\text{Communication} \geq \text{threshold}) \text{ AND } (\text{Judgement} \geq \text{threshold}) \text{ AND } (\text{EC} \geq \text{threshold}) \text{ AND } (\text{no critical risk flags}) \text{ AND } (\text{human_review} = \text{approved})$.

Values — values are not included in CCI/CRI gates. They influence coaching narrative, preferred development style and optional team-working insights only.

Appendix D. Candidate Report Blueprint

Page / block	Content
1	Cover, Enterprise ID, date, report version, disclaimer.
2	Executive summary and recommended next action.
3	CCI / CPI / CRI / Evidence Confidence tiles.
4	C01–C20 capability radar.
5–6	Capability heatmap vs target role.
7–8	Enterprise Talent DNA.
9–10	Schwartz values wheel + higher-order balance + neutral interpretation.
11–14	Strategy, research, value chain and business analysis.
15–17	Process, TOM, transformation, change, organisation and governance.
18	Programme/portfolio, AI transformation awareness.
19–21	Case / work sample evidence and rubric.
22–23	Written + video executive communication.
24	Professional judgement, stakeholder/facilitation.
25–26	Role matches and mandatory gaps.
27–30	Skills gap, 12/16-week roadmap, assignments and reassessment.
31	Opportunity / industry/geography view if enabled.
32	Methodology, evidence sources, confidence, limitations and human review status.

Appendix E. Codex / Engineering Build Directive

Use this section as the concise master instruction when initiating or refactoring the METI Management Consulting application in Codex or another engineering agent.

23. Build METI as a production-grade, multi-tenant Enterprise Talent Intelligence platform with a dedicated Enterprise Management Consulting track; do not build it as a single form or monolithic CRUD application.
24. Use NextJS 15 + React + TypeScript + Tailwind/ShadCN for the web application; FastAPI + Python for backend APIs and AI services; PostgreSQL/Azure SQL for transactions; Neo4j for the competency/evidence graph; Redis for ephemeral state; Azure Blob for evidence; Azure AI Search for approved RAG; Azure OpenAI/Azure AI Foundry for LLM services; LangGraph for agent orchestration; Docker + GitHub Actions + Azure Container Apps for deployment.
25. Implement the complete journey: landing/video → registration/consent → entitlement/payment → core diagnosis → consulting deep dive → video/case/work sample → AI scoring → human review when required → report → role/pathway → learning plan/dashboard.
26. Implement native, versioned AssessmentDefinition, Section, Question, Response, Attempt, Rubric, ScoreComponent, CompositeScoreSet and EvidenceArtifact services. Never hard-code assessment content in UI components.
27. Create F01–F22 from this TDD as seed definitions. Support all question/evidence types in Appendix B, autosave, branching, timing, save/resume and immutable published versions.
28. Implement Enterprise Talent DNA and a Schwartz-informed values module. Values must be descriptive and excluded from client-readiness pass/fail scoring.
29. Implement video management, YouTube/hosted playback progress, captions/transcript, recorder/upload, speech-to-text, content rubric scoring, deterministic delivery metrics and human fallback. Never score facial appearance/emotion, accent identity or protected traits.
30. Implement the competency model C01–C20 and evidence-confidence scoring. Demonstrated case/video/work evidence must outweigh self-report.
31. Implement agents A01–A20 with strict JSON contracts, versioned prompts, schema validation, tool allow-lists, timeouts, retries, confidence and evidence citations. Persist shared state; keep agent prompts separate from business rules.

32. Implement candidate, assessor, mentor, employer/recruiter, content author, admin, compliance and super-admin RBAC. Enforce tenant and consent scope on every API and storage access.
33. Implement candidate/internal/employer report variants from immutable score snapshots. Every AI narrative must be grounded in stored scores/evidence only.
34. Implement admin builders for assessments, questions, rubrics, cases, videos, scoring profiles, report templates, prompts/models, users, pricing and publishing workflows.
35. Implement security, privacy, accessibility, audit and fairness requirements from Section 22 as release-blocking requirements, not later enhancements.
36. Generate OpenAPI/Swagger, database migrations, automated tests, seed data, architecture docs, local Docker setup, CI/CD, runbooks and Azure deployment configuration from day one.
37. Deliver iteratively by Phase 0–6; the first usable release must complete an end-to-end Core Diagnosis and report loop before expanding breadth.
38. After each paid assessment, generate an entitlement-scoped Summary of Findings immediately. Add D250 as a separate USD 250 configurable entitlement that unlocks the detailed Intelligence Report, personalised Development Roadmap and premium AI Results Explainer. The explainer must be grounded only in immutable score/evidence snapshots and must enforce entitlement boundaries on every response.
39. Implement Product, PriceBook, Bundle, Payment, Invoice and Entitlement services so Management Consulting Assessment, Professional Personality & Values Assessment and combined bundle are separately purchasable. Use USD 25 as the configurable default entry price for each standalone assessment unless product configuration overrides it. Do not hard-code price or form access in the UI.

Primary uploaded sources: “0001-MODUS Enterprise Transformation Consultant Assessment.pdf”; “0002Modus Enterprise Talent DNA Assessment.pdf”; “MASTER CODEX BUILD INSTRUCTION.pdf”; “METI - Commercial model.pdf”; “Modus-Learn-Industry-Value-Chain-Transformation-08-20-2026_07_53_PM.pdf”.

Public Modus assessment experience: [Modus Learn — Industry Value Chain Transformation](#)

Linked explainer video: [00-Modus Enterprise Transformation — YouTube](#)

Schwartz theory reference: [Schwartz \(1994\), Journal of Social Issues](#)

Schwartz theory distinguishes ten motivational value types and a circular structure of compatibilities/conflicts. METI should use that theory for a developmental values profile only unless a validated instrument and appropriate psychometric validation are implemented.
